

Lifecycle OS. The growth department, *as software.*

One application that reads our customer data, watches our competitors, plans the month, writes the emails, builds the ads and landing pages — and runs the loop every morning with human approval.

Anchit Tandon · Growth · July 2026

Live: vahdam-marketing-mailers-architect.vercel.app · Full PRD: [docs/PRD.md](#)

Growth work was scattered, slow, and off-brand.

- **Disconnected tools.** A dashboard here, an email builder there, competitor intel in spreadsheets — the same context re-derived in every tool, every week.
- **No shared plan.** If nobody sat down to plan the month, there was no plan. Festivals were remembered too late.
- **Brand drift.** Every generator and freelancer started from scratch: wrong greens, wrong fonts, "hurry — last chance!" copy the style guide bans.
- **Blind to the market.** No systematic view of what 30+ competitor brands were sending, discounting, or launching.
- **No memory.** Winning campaigns weren't captured anywhere a future campaign could learn from.
- **The cost:** days from idea → mailer, inconsistent output, and retention decisions made from stale exports.

SEPARATE SURFACES BEFORE

days

IDEA → PRODUCTION MAILER

0

ALWAYS-ON PLANNING PROCESS

One OS that runs the whole loop — insight → plan → creative → learn.

- **11 modules** behind one login, one navigation shell, one brand system.
- **AI-native:** every generator is brand-locked at the code level; an AI Brain plans daily; a brand LLM (ChaiGPT) operates everything conversationally.
- **~\$0 fixed infrastructure** — free-tier architecture by design.

Eight domains, one operating system.

01 Intelligence

Data Analysis: 9 RFM segments, cohort retention, product & send-time intelligence, auto-insights.

02 Planning

30-day marketing calendar + the Brain's rolling 15-day plan per market, festival-aware.

03 Creative — Email

Mailer Studio: 5-step wizard, 11 layout archetypes, 4 variants per campaign, self-scoring pipeline.

04 Creative — Paid

Ad Campaigns (Google/Meta/TikTok, baked-text creatives) + hosted Landing Pages at /lp/:id.

05 Competitive Intel

Every competitor email auto-captured (full HTML + promo codes); ad libraries; offers & funnels.

06 Knowledge

Brand kit, historical winners, references — the single source every generator reads from.

07 Autonomy

Smart Brain: daily 03:30 UTC re-plan, full-funnel generation on approve, human-in-the-loop.

08 Conversation

ChaiGPT (internal operator with evidence contract) + Vahdam Agent (buyer-facing voice concierge).

CATALOG PRODUCTS · 3 REGIONS

Data Analysis — see who buys, who drifts, what to send next.

- **7 views:** revenue pulse, campaign deep-dive, audience segments, product intelligence, send-time behavior, cohorts & retention, strategic insights.
- **9 RFM segments** with discount-sensitivity, category-affinity and engagement-decay overlays.
- **Bring your data:** CSV/XLSX upload or link a database; region & currency aware (US/UK/Global/India).
- **Feeds everything:** the calendar and every AI brief start from this state — no more guessing.

Marketing Calendar — a month of sends in one click.

- **Generates a 30-day plan** across markets with weekly send-capacity limits — every entry: segment (live size), content type, layout archetype, hero product, subject hint.
- **Festival-aware** (Independence Day, Prime Day, Diwali...) and send-time tuned from the analytics.
- **One click to production:** any row feeds straight into the Mailer Studio pipeline.

Mailer Studio — brief to 4 brand-locked variants in minutes.

1 CAMPAIGN BRIEF

What are we sending today?

Describe your campaign idea — or let AI **Create** a director-grade brief from scratch. Then set your market and campaign type below.

CAMPAIGN DESCRIPTION *

e.g. 20% off all turmeric & ginger teas with code DETOX20. Focus on gut health, daily wellness ritual, natural ingredients. Free shipping on orders over \$49. Warm, inspiring tone.

Create Brief with AI AI creates a director-grade brief from scratch using your market, campaign type, and product picks. Or type any seed idea first.

TARGETING

TARGET MARKET * Multi-select — each market gets its own tailored mailer

United States United Kingdom India Global Middle East Australia Europe

TARGET USER SEGMENT Who is this mailer for? — drives copy, imagery, and tone

e.g. Urban wellness-curious professionals, 28-42, in NYC/LA. Buy premium grocery, drink 1-2 cups daily, trust farm-direct origin. Lapsed buyers in last 90 days who tried our chai but didn't repeat.

Generate with AI AI infers a precise segment from your brief, market, and campaign type — refine if needed.

CAMPAIGN TYPE Multi-select — pick 1-3 to blend the vibe (e.g. Gift + Sale, Routine + Story)

Auto Sale Launch Seasonal Bestsellers Gifting Discovery Routine Brand Story

Select Products →

We'll auto-pick the best matching products from the VAHDAM catalog — or you can choose manually in the next step.

Listen Ask the Studio assistant — copy, subject lines, ideas...

- **The founding app** (34 versions of iteration). 5-step wizard with AI brief-writing and real catalog product picks.
- **4 variants per campaign** — 2 image-led + 2 text-led — with **forced structural divergence** so A/B tests are real tests.
- **11 layout archetypes**, region-correct prices & store links, ~2-scroll output.
- **Self-scoring pipeline**: strategy → variants → images → HTML → score; weak variants are retried before a human sees them.

Daily insights

Run a sync to refresh insights.

Changes from last sync

No sync run in this session yet.

- **Every morning (03:30 UTC)** the Brain re-plans a rolling 15-day calendar per market against fresh data, festivals and competitor moves — **without touching anything a human already approved.**
- **Every slot arrives scored** (cohort, objective, channels, confidence %) with the full funnel previewable *before* approval.
- **Approve = generate everything:** mailer + Meta/Google/TikTok ads + a hosted landing page at /lp:id — in one click.
- **Safety by design:** nothing sends automatically (Phase 2 gate); weekly human recalibration is mandatory.

ChaiGPT — the brand's own AI. It doesn't chat, it operates.

- **11 real tools:** analytics, cohorts, calendar, competitor benchmarks, knowledge base, campaign generation, Klaviyo — the same code the app runs.
- **Evidence contract:** every recommendation quotes exact tool-sourced figures, names the target metric + expected impact, and benchmarks competitors. It never invents data.
- **Shows the tool trace** like a real analyst showing their work.
- **Provider-independent:** works across all 6 LLM providers, including free tiers.

Know the market. Remember everything.

COMPETITOR BENCHMARKING — EVERY RIVAL EMAIL, AD LIBRARY & LANDING PAGE

- **Auto-captured competitor mailers** (full HTML + promo codes, minutes after they land), 30+ tracked brands, Meta/Google/TikTok ad libraries, offers & funnel intel — at \$0/month.

KNOWLEDGE BASE — BRAND KIT, WINNERS & REFERENCES THAT SEED GENERATION

- **The single source generators read from:** historical winners with metrics become style anchors; AI-ingest any URL; strictly separated from competitor data so their noise never qualifies our winners.

Paid acquisition — one calendar, baked-in creative, instant landing pages.

AD CAMPAIGNS — GOOGLE / META / TIKTOK ON ONE CALENDAR, TEXT BAKED INTO EVERY SIZE

LANDING PAGES — BRIEF → HOSTED PAGE AT /LP/:ID, SAME BRAND SYSTEM AS THE EMAIL

- **P01 mandate encoded:** "sell happiness, not ingredients" — emotional end-state creative with offer text baked into the image, per platform size.
- **Every mailer gets a matching page** — same hero, same offer, one CTA — generated together and hosted immediately.

Engineered to be **unbreakable** and (almost) free.

6-provider AI waterfall

OpenAI → Anthropic → Gemini → Grok → Groq → Cerebras. If a provider fails or runs out of credit, the system degrades to free tiers instead of failing. No single-vendor dependency.

Image cascade + brand placeholder

Gemini → Imagen → GPT-Image → Pollinations (free) → on-brand placeholder. A campaign never ships a broken image tile.

Exactly 12 functions

The Vercel free-plan cap, treated as a design constraint: action-routers + shared modules mean new features cost ~zero new infrastructure.

Brand kernel in code

4 colors, 2 typefaces, banned/preferred phrase lists enforced at generation time — client-side check + server-side scrub. Compliance is a property of the system, not a review step.

Keyless Google auth

Workload Identity Federation: no stored Google keys anywhere. Cron and webhooks secret-protected; service-role keys never reach the browser.

Real data engines

Supabase (40+ tables) + offline DuckDB pipeline for Shopify/Klaviyo/WebEngage exports; catalogs rebuilt at every deploy (US 173 · UK 101 · Global 102 products).

KLAVIYO OPS SCAFFOLDED — LIVE WITH 1 KEY

The mobile super app — the whole OS in your pocket.

- **One app, all eleven tools.** Installable PWA + native **Android** and **iOS** apps (Capacitor shells over the live deployment).
- **Auto-synced by architecture:** the native apps render production directly — every web deploy *is* a mobile release. The complete Android + iOS project code lives in this repo; there is no second repo to drift.
- **Approve from your phone:** the Smart Brain's pending approvals, ChaiGPT, dashboards — all mobile-ready with the same login.
- **Downloadable builds** published by CI to a fixed link (GitHub → Releases → **mobile-latest**) — **verified building green:**

✓ Android APK — direct install

✓ iOS IPA — sideload / TestFlight-ready
- **Next:** Play Store & App Store listings + push notifications for pending approvals (Phase 2).

COM.VAHDAM.LIFECYCLEOS — "VAHDAM LIFECYCLE OS" (DARK BRAND SHELL #0A1410)

From one email tool to an operating system — in 26 days.

- Jun 07** **Foundation.** Repo consolidation, keyless Google auth (WIF), knowledge base, competitor capture hardening, one-prompt autofill.
- Jun 09** **Studio consolidated** at /studio · competitor auto-subscribe worker goes live.
- Jun 10** **Smart Brain MVP** — persistent 15-day rolling plan, daily cron, approve → generate, hosted landing pages.
- Jun 13–18** **Voice agents + Competitive Intelligence system** — presell funnels with an embedded talking agent; ci_* database + off-platform collectors.
- Jun 19–21** **Hardening week.** Full-funnel preview before approval; AI creatives for every asset; PWA installable; brand asset engine enforced everywhere; P01 "sell happiness" mandate encoded; growth-team commands.
- Jun 22–25** **Dual-mode + scenarios.** Budget/Max-Power tiers, 5-scenario calendar engine, CI quality gates, strict palette lock.
- Jun 26** **ChaiGPT ships** — the brand LLM operating the whole stack · Klaviyo integration scaffolded end-to-end.
- Jul 01** **Native Android + iOS super apps** · portfolio-hub homepage · asset hub with portable prompts.
- Jul 02** **PRD v1.0 + this deck** · downloadable mobile builds pipeline shipped and verified green — both binaries live at **mobile-latest**.

DAYS

Phase 2: **close the loop.** Then let it compound.

Now → **Closed-loop sending**

Klaviyo goes live with one API key (every request already dry-runs today). Approved campaigns push themselves; performance flows back into the Brain's winner thresholds.

Next **Delegated autonomy**

Auto-approve above confidence thresholds with per-market spend caps — humans set policy, the Brain executes, weekly recalibration stays mandatory.

Then **Compounding intelligence**

Every asset, approval, rejection and competitor move feeds retrieval-augmented generation. The system's taste improves with use — that's the moat.

Scale **Beyond one brand**

The brand kernel is one module; ChaiGPT renames in one line. The same OS can run any D2C brand's growth loop — or every VAHDAM market as its own instance.

The end state: a growth team that spends its time on strategy and taste — while the OS does the reading, planning, writing, designing and remembering. Humans approve; the machine compounds.
