

MARKET RESEARCH & COMPETITIVE STUDY

The U.S. Functional-Wellness Beverage & Supplement Market

Tea · Functional Coffee · Adaptogens — with a teardown of the US adaptogen-coffee arena

Prepared for: Growth & Digital Production, VAHDAM (US market)

Date: 9 July 2026

Confidence-tagged throughout: [Certain] / [Likely] / [Guessing]

1. Scope & method

[Certain] This study covers the US functional-wellness intersection VAHDAM actually competes in — premium/wellness tea, functional & adaptogenic coffee, and the adaptogen-supplement crossover — not commodity coffee or bagged black tea.

- Figures from named research previews & trade press; ranges shown where firms disagree.
- Regulatory frame is US: FDA/DSHEA (supplements are not pre-approved) + FTC (truth-in-advertising). Looser than UK ASA/MHRA — which shapes how aggressively rivals claim.
- VAHDAM is the anchor; rivals are read for the openings they leave.

2. Executive summary

[Certain] The US is the category's birthplace and largest arena: DTC-mature, functional-coffee-led, and defined by adaptogen-coffee challengers (Ryze, MUD\WTR, Four Sigmatic) plus greens (AG1) and women's-hormone (Happy Mammoth).

[Certain] VAHDAM's origin moat is at its strongest here: rivals import ashwagandha, turmeric and chai; VAHDAM owns them at source. Crucially, VAHDAM has done what almost no pure-play challenger has — crossed from DTC into ~1,000 Target stores (Mar 2026), at an aggressive ~\$0.80/serving.

[Likely] The dominant challengers are mushroom-led, not ashwagandha-led (Ryze's Super-6 has no ashwagandha). That leaves the "ashwagandha-forward calm-energy" position genuinely contestable — and it is exactly VAHDAM's formula.

[Likely] The category price ceiling is set by AG1 (~\$79–\$99); the value floor by Everyday Dose (<\$1/serving). VAHDAM sits low in the band with a fuller product range behind it.

[Guessing] Biggest risk is claims, not product: on-site cortisol/weight testimonials invite FTC scrutiny. Looser than the UK, but not zero-risk.

3. Market sizing

Scopes differ sharply by firm; treat as magnitude, not accounting.

Segment	Size / figure	Source & note
US tea market	~\$1.5–3.6B (firms disagree widely); herbal tea ~\$3.1B (~62% functional-driven)	[Likely] multiple firms; scope varies
US coffee market	~\$23.8–24B	[Certain] range across firms
Global functional coffee	\$4.48B → \$8.48B by 2031, ~11.2% CAGR (NA ~69%)	[Certain] category's fastest sub-segment
US mushroom coffee	~\$618M → ~\$1.09B (2035)	[Likely]
US dietary supplements	\$60.2B → \$96.5B (2034)	[Certain]
US ashwagandha	\$0.13B → \$0.39B, 11.4% CAGR; 26–39% of adaptogens; fastest in F&B (15.6%)	[Certain] the ingredient VAHDAM owns
Global adaptogen coffee	~\$1.1–1.7B (2025); ~6–17% CAGR depending on	[Likely] FMI / HTF / R&M

Segment	Size / figure	Source & note
	firm/scope	

Ashwagandha is the single most-chosen adaptogen (~18–26% of adaptogen demand) and the fastest-growing in food & beverage — structurally favourable to VAHDAM's hero SKU.

4. Structural dynamics

A DTC-native, coffee-led category

[Certain] The US category grew up on DTC subscription + social proof (Ryze cites 200K+ reviews). Functional coffee — not tea — is the acquisition engine, because it slots into an existing daily habit and removes supplement stigma.

Format, price & retail crossover

- Instant powder is the dominant format; subscription is the default purchase; 30-day money-back is table stakes.
- The frontier is DTC→retail. VAHDAM's Target rollout is a genuine moat most pure-plays haven't crossed — shelf presence + trust that ad spend can't buy overnight.

Regulation (looser, not absent)

[Certain] Under DSHEA, supplements aren't pre-approved; under FTC, claims must be truthful and substantiated. Quantified cortisol and weight-loss testimonials are the classic enforcement triggers — the looser regime is why US rivals claim harder than UK ones.

5. Major players — US adaptogen / functional coffee

VAHDAM's core competitive set. The decisive column is “Ashwagandha?” — the leaders are mushroom-led, leaving VAHDAM's angle open.

Brand	Format	Key actives	Ashwagandha?	Price/serving	Notes
VAHDAM	Instant + real Arabica	KSM-66, Lion's Mane, Turmeric 95%, Chaga	Yes — KSM-66	~\$0.80 (Target SRP \$15.99/20)	In ~1,000 Target stores; 30-day MBG
Ryze	Instant	Super-6 mushroom blend	No	~\$0.90–1.20	DTC volume leader; 200K+ reviews; sub-default
MUD\WTR	Instant	6 mushrooms + cacao + masala chai	No	~\$1.50–1.70	Coffee-alternative; free frother; ritual brand
Four Sigmatic	Instant + ground	Lion's Mane, Chaga	No (not core)	~\$1.13–2.25	Category pioneer; in grocery; lab-tested
Everyday Dose	Instant	Lion's Mane, Chaga, collagen, L-theanine	No	<\$1	Best value; gentle on-ramp
Spacegoods (UK, ships US)	Instant, cacao-forward	Lion's Mane, Cordyceps, Chaga, Maca, Ashwagandha	Yes	~\$1.30-equiv	60-day MBG; expanding into US

[Certain] on formats/positioning; [Likely] on pricing (pack/subscription-dependent). Of the US-native leaders, none leads on ashwagandha — the calm-energy ashwagandha lane is VAHDAM's to take.

6. Competitor deep-dives

VAHDAM (anchor)

"Feel Alive." Premium Indian tea + adaptogen coffee, farmer-direct from origin.

Hero product: Ashwagandha Coffee — Arabica + KSM-66 Ashwagandha, Lion's Mane, 95%-curcumin Turmeric, Chaga. Instant; 40–240 servings DTC.

Retail: Launched in ~1,000 Target stores (Mar 2026) at SRP \$15.99/20 servings (~\$0.80/serving) — a real DTC→retail crossover.

Range: Genuine multi-category catalogue: black/chai/green/herbal teas, coffee, spices, teaware, gift sets; celebrity/press halo (Oprah, Mariah Carey; top luxury-tea rankings).

Positioning: "Calm energy"; cortisol/stress support; "Crafted in India, backed by science, loved across 145 countries"; 30-day money-back.

Strengths: Owns the origin of the botanicals rivals import; retail distribution ahead of most pure-plays; aggressive price; real range + heritage; strong press/celebrity credibility.

Weaknesses / openings: Brand meaning split across tea + coffee + spices vs. a single-minded Ryze. Cortisol/weight testimonials carry FTC risk. Must avoid reading as "just another instant mushroom coffee" despite a better sourcing story.

Ryze

The DTC volume leader. "Mushroom coffee, reimaged."

Formula: Super-6 mushroom blend (no ashwagandha); instant; subscription-default.

Proof: 200K+ reviews; heavy social/DTC engine; ~\$0.90–1.20/serving; 30-day MBG.

Strengths: Category-defining scale, review moat, efficient DTC funnel.

Weaknesses / openings: Mushroom-only — no ashwagandha, no tea heritage, no retail range. The ashwagandha "calm energy" angle and physical shelf are both open to VAHDAM.

MUD\WTR

The coffee-alternative ritual brand. Masala chai meets mushrooms.

Formula: 6 mushrooms + cacao + masala chai + spices; positions as a coffee replacement, not coffee-plus.

Economics: ~\$1.50–1.70/serving; free frother; strong brand/community.

Strengths: Distinctive ritual brand; owns "ditch coffee" positioning; chai-spice flavour is culturally close to VAHDAM's roots.

Weaknesses / openings: No real coffee for those who still want caffeine ritual; pricier; VAHDAM's Arabica base + authentic Indian chai/turmeric provenance is a stronger origin story on the same flavour territory.

AG1 & Happy Mammoth (adjacents)

The price ceiling and the hormone-funnel benchmark.

AG1: 75-ingredient greens powder; NSF-certified; ~\$79–\$99 (~\$1.05–\$1.32/serving); 90-day MBG; celebrity-marketed — sets the category price ceiling.

Happy Mammoth: Hormone Harmony capsules — KSM-66 + 12 extracts; women/menopause/cortisol; quiz funnel; 3.3M customers; ~\$2.92/serving; 60-day MBG.

Strengths: AG1 proves consumers pay premium for “one daily wellness ritual”; Happy Mammoth proves the ashwagandha-for-cortisol thesis converts at scale via quiz funnels.

Weaknesses / openings: Neither is a coffee. VAHDAM can undercut AG1 on price and out-format Happy Mammoth (a drinkable daily ritual vs. capsules) while using the same KSM-66 credibility.

7. VAHDAM US — strategic read

1. **Press the ashwagandha lane.** The US leaders are mushroom-led. Own “ashwagandha-forward calm energy” explicitly — it’s the open flank.
2. **Make the Target crossover the story.** “The adaptogen coffee you can actually buy in Target” is a trust signal no pure-play DTC brand can match.
3. **Bracket the price band.** Anchor against AG1’s ceiling (“all that ritual, a fraction of the price”) while defending quality vs. Everyday Dose’s floor.
4. **Tighten the claims.** Replace quantified cortisol/weight testimonials with substantiated, hedged wording before FTC does it for you.

[Likely] Net: the US is where VAHDAM’s origin + range + retail advantages compound. The job is single-minded positioning (ashwagandha calm-energy) and disciplined claims — not more features.

8. Regulatory notes (US)

- **FDA/DSHEA:** dietary supplements are not pre-approved; structure/function claims allowed with the standard disclaimer; no disease claims.
- **FTC:** advertising (incl. testimonials & influencer content) must be truthful and substantiated; quantified physiological/weight claims are the enforcement hot-spot.
- **Practical rule:** keep to “calm, focus, energy without jitters, stress support” framing; substantiate anything quantified.

9. White space & recommendations

- “Ashwagandha-forward, real-coffee, origin-owned” is uncontested by the US mushroom-led leaders.
- DTC→retail credibility (Target) is a differentiator to amplify, not bury.
- Heritage tea range + gifting is a cross-sell and trust asset no single-SKU challenger has.
- Compliance-led marketing is a moat in an over-claiming category.
