

VAHDAM Ad Campaign SOP

Standard operating procedure for ad execution across UGC, Target, Costco and D2C. Live from Monday.

Master tracking sheet:

https://docs.google.com/spreadsheets/d/1SoYc6YFGa6SM_GpvrCVZDaN0otpshG_E6grxw-BljVA/edit?usp=sharing

Scope. This document covers the process. The sheet carries the data. Every detail for a specific ad sits in the sheet on that ad's row and is not repeated here.

Authority. The sheet is the source of truth. Where the sheet and this document differ, the sheet is correct and this document is corrected to match.

Structure. Sections follow the sheet tab by tab, in the same order.

Tab	Contents	Used for
Index	Tab guide, row layout, colour coding, setup	Orientation
Scoring Legend	Score bands, thresholds, weights, view penalties, run status	How a creative earns spend
Nomenclature	Naming syntax, rules, token values, URL parameters	The standard the agency builds to
Landing Pages	PageDeck destinations by content bucket, with performance	Where UGC traffic goes
Master UGC Tracker	Live pull from Vinya's team's sheet	The organic data behind every scoring decision
UGC, Target, Costco, D2C	Campaign execution, 26 columns each	Daily work, one tab per channel

Tab 1 - Index

Lists every tab, its contents, and its owner.

Row layout, identical on all four campaign tabs

Row	Contents	Editable
1	Column header	No
2	Who fills that column	No
3	Worked example	No
4 onward	Live entries	Yes

Row 2 is how a new person identifies what they own. Row 3 is the template, copied down.

Formula columns. CTR, CPC, CPA and ROAS are formulas. The inputs are Spend, Impressions, Clicks, Conversions and Revenue. Overwriting a formula cell stops it calculating for every row below.

Ad Code formatting. Plain text, so codes are not converted into currency or scientific notation.

Setup. The Master UGC Tracker tab requires Allow access to be granted once on cell A1 at first open. No other setup applies.

Tab 2 - Scoring Legend

Defines how spend is allocated. The full logic sits in the sheet.

Score composition

Each organic post carries a score out of 100. The two platforms are scored differently because they reward different behaviour.

TikTok

Metric	Weight	Rationale
6-sec View %	40%	Strongest available signal. A viewer still watching at six seconds means the hook worked, and TikTok's algorithm rewards this directly.
Shares	25%	Viral intent. The highest organic endorsement a post receives.
Likes + Comments	20%	Active engagement. Comments indicate a real reaction rather than a passive tap.
Views	15%	Reach without resonance. Deliberately the smallest weight.

Instagram

Metric	Weight	Rationale
Views (Plays)	40%	Reach indicates the algorithm is distributing the content.
Likes	35%	Primary Instagram engagement signal.
Comments	15%	Rarer on Instagram, and a strong signal when present.

The Instagram weights total 90%. This is under review with Samvita. Until resolved, the Organic Score column is the authoritative value.

View penalties

Applied to the raw score. A high percentage on a small sample is not evidence.

Platform	Organic views	Multiplier	Rationale
TikTok	Under 50	0.45	Sample too small to be reliable
TikTok	50 to 199	0.70	Small and growing
TikTok	200 to 499	0.85	Reasonable sample, minor discount
TikTok	500 and above	None	Full confidence
Instagram	Under 100	0.50	Unreliable
Instagram	100 to 499	0.75	Small but trackable
Instagram	500 and above	None	Sufficient reach

Score bands

Score	Label	Meaning
70 to 100	Elite	Top-tier organic. Strong hook, high retention, real engagement. First to boost.
50 to 69	High	Solid hold and engagement. Boost with confidence.
30 to 49	Good	Meets the Ad Recommended threshold. Worth testing with budget.
20 to 29	Consider	Some signal. Small spend first.
0 to 19	Not ready	No spend. Creative requires rework.

Thresholds

Platform	Label	Condition
TikTok	Ad Recommended	Score 30 or above, OR 6-sec view rate 25% or above
TikTok	Consider	Score 20 or above, OR 6-sec 18% or above, OR ER 8% or above
TikTok	No	Below all of the above

Platform	Label	Condition
Instagram	Ad Recommended	Score 20 or above
Instagram	Consider	Score 13 or above, OR likes/views 5% or above
Instagram	No	Below all of the above

The 6-second rule auto-qualifies a TikTok post regardless of total score. A hook holding past six seconds has already beaten the platform's skip behaviour.

Run status

Two columns look similar. Only one is an instruction.

Column	Function
Ad Recommended	Scoring output. States what the numbers indicate.
Ads Activated	Run instruction. States what to do.

Ads Activated value	Meaning	Agency action
Review before running ads	Cleared Level 2, queued for the agency	Review spelling, grammar and formatting, then set live
Yes	Already live	None. Reporting only.
No	Did not clear the benchmark	Do not set live
blank	Not yet assessed	Wait

No ad goes live unless Ads Activated reads "Review before running ads".

Tab 3 - Nomenclature

One syntax applies everywhere. The string entered into the platform as a campaign, ad set or ad name is the same string carried in the URL as a UTM value. There is no second, human-readable form.

Character set. Lowercase only. Underscore between fields. Hyphen inside a field. Dates as **yyyy-mm-dd**.

What	Syntax	Example
Campaign name	yyyy-mm _ platform _ objective _ type	2026-06_meta_conv_target
Ad Set name	yyyy-mm-dd _ audience _ placement	2026-06-11_over40-high-performer_ig-reels
Ad name	yyyy-mm-dd _ type _ product _ audience _ surface _ videoid	2026-06-11_target_ashwa-coffee_over40-high-performer_instagram_7644934695515393294
utm_source	platform-surface	meta-instagram
utm_medium	fixed literal	paid-social
utm_campaign	the campaign name	2026-06_meta_conv_target
utm_term	the ad set name	2026-06-11_over40-high-performer_ig-reels
utm_content	the ad name	2026-06-11_target_ashwa-coffee_over40-high-performer_instagram_7644934695515393294
acq_source	type _ platform	target_meta
acq_subsource	creator _ bucket _ hook	jeorginaugc_cortisol_problem-pain

The type token changes per channel: **target**, **costco**, **d2c**, **ugc**. Costco runs on TikTok, giving **utm_source** of **tiktok-tiktok** and **acq_source** of **costco_tiktok**.

Worked URL, Target

https://www.target.com/p/vahdam-ashwagandha-medium-roast-calm-energy-and-focus-support-instant-coffee-2-11oz/-/A-95055145?utm_source={{site_source_name}}&utm_medium=paid-social&utm_campaign={{campaign.name}}&utm_term={{adset.name}}&utm_content={{ad.name}}&acq_source=target_meta&acq_subsource=jeorginaugc_cortisol_problem-pain

Macros. Where Meta provides one, the macro is used rather than the literal string: `{{campaign.name}}`, `{{adset.name}}`, `{{ad.name}}`, `{{site_source.name}}`. Each resolves to the value shown above. `acq_source` and `acq_subsource` have no macro and are copied from the sheet row.

Rules

#	Rule	Consequence if broken
1	No space, /, , , &, ?, %, + or # in any name or parameter	Space becomes %20, slash becomes %2F, comma breaks CSV export, & and ? break the query string, # truncates the URL
2	Lowercase only	GA4 and several platform APIs are case-sensitive. Mixed case splits one campaign across multiple report rows.
3	videoid mandatory on every ad name and inside utm_content	The ad cannot be mapped to its organic performance
4	acq_subsource carries creator, bucket and hook	Revenue by creator, content angle and hook style is unavailable
5	Target and Costco names kept strictly separate	Reporting overlap. Costco campaigns have previously been built using Target keywords.
6	Token values copied, not retyped	One mistyped token splits a single audience across two report rows
7	Names in Ad Manager match the tracker exactly	The asset is paused

Token values

Token	Permitted values
platform	meta tiktok
surface	instagram facebook tiktok
objective	conv
type	target costco d2c ugc
audience	over40 high-performer over40-high-performer broad-lookalike
placement	ig-reels ig-stories fb-feed tiktok-infeed advantage-plus
product	ashwa-coffee turmeric-tea
bucket	cortisol gummies-vs-coffee target-shelf anti-mushroom taste over40-high-performer target-instore
hook	curiosity problem-pain age-stage personal-discovery comparison callout-ifyou lifestyle taste-sensory
lang	en es pt

Tab 4 - Landing Pages

UGC ads route to a dedicated PageDeck page built for that content angle, not to the product page. Each new UGC campaign receives its own page.

Content bucket	Landing page
Cortisol	buy.vahdam.com/coffee-cta-ugc-cortisol
Countering Mushroom Coffee Trend	buy.vahdam.com/coffee-cta-ugc-mushroom
Taste	buy.vahdam.com/coffee-cta-ugc-taste
Target Shelf Showdown	buy.vahdam.com/coffee-cta-ugc-targetstore
Gummies vs Coffee	buy.vahdam.com/coffee-cta-ugc-gummies

Content bucket	Landing page
Over 40 / High Performer	buy.vahdam.com/coffee-cta-ugc-over-40-woman
Target In-Store Discovery	Target PDP direct. No PageDeck page at present.

The tab carries live PageDeck performance per page: visitors, page views, average view duration, external clicks and clickthrough rate.

Supply. Anchit provides the landing page URL with the brief for every UGC campaign. The URL in the row is used as given. The generic product page is not substituted, because the page is the attribution.

Conversions. The conversion and revenue columns in PageDeck read zero. This is a structural limit, not a fault. Purchases complete on target.com, instacart.com or Shopify, all outside PageDeck's visibility, so no purchase can be attributed to an individual ad at the PageDeck layer.

Measure	Source
Traffic and engagement	PageDeck
Conversion and revenue	Platform reporting and Shopify

Traffic reconciles: approximately 23,570 ad clicks against 25,594 landing page visitors, with around 10,165 clicks passed onward to the destination.

Tab 5 - Master UGC Tracker

A real-time pull from the master UGC sheet maintained by Vinya's team. No data is copied by hand, so both sides view identical numbers.

Read-only. Entries typed into this tab are overwritten on the next refresh. Corrections are made in the source sheet.

Formatting. All colour coding from the source is reproduced: the Platform band, the 6-sec View band, activated ads, and reviewer highlights on individual rows.

Tabs 6 to 9 - UGC, Target, Costco and D2C

One tab per channel. Identical 26 columns in identical order.

#	Column	Provided by
1	Ad To Be Run (Brief)	Sneha's team. Anchit for D2C.
2	Campaign Level Name	Agency, from the brief
3	Ad Set Level Name	Agency, from the brief
4	Ad Level Name	Agency, from the brief
5	Platform	Sneha's team. Anchit for D2C.
6	Placement / Format	Sneha's team. Anchit for D2C.
7	Product / SKU	Sneha's team. Anchit for D2C.
8	Target Audience	Sneha's team. Anchit for D2C.
9	Target Audience Criteria Set for Campaign	Sneha's team. Anchit for D2C.
10	Budget	Sneha's team. Anchit for D2C.
11	Goal / KPI	Sneha's team. Anchit for D2C.
12	Creative Link	Sudhanshu
13	Landing Page URL	Anchit. New page per campaign for UGC.
14	Ad Code	Agency, on going live
15	Ad Link	Agency, on going live

#	Column	Provided by
16	Ad Report Link	Agency, on going live
17	Status	Agency, and on every change
18	Spend	Agency, within 72 hours
19	Impressions	Agency, within 72 hours
20	Clicks	Agency, within 72 hours
21	CTR	Auto-calculated
22	CPC	Auto-calculated
23	Conversions	Agency, within 72 hours
24	CPA	Auto-calculated
25	ROAS	Auto-calculated
26	Revenue	Agency, within 72 hours

Revenue is column 26. It exists so ROAS calculates rather than being entered manually.

The UGC flow - three levels

Three parties. Each level performs a distinct function.

Level 1 - Vinya's team

Owens: the master UGC sheet and all organic data. Creator post, URL, platform, publish date, content bucket, views, likes, comments, shares, 2-second and 6-second view rates, average view time, engagement rate.

Function: accuracy at source, and the first quality filter on whether a post is usable.

Dependency: the tracker pulls from this sheet live. An error at this level passes directly into scoring and then into what the agency runs. No manual checkpoint exists in between.

Level 2 - Anchit

Owens: the scoring decision, the Ads Activated column, all landing pages and URL parameters, and the full brief for D2C.

Function: each post is scored using the formula and view penalties in the Scoring Legend, checked against the platform threshold, and marked in Ads Activated. Clearing the threshold sets "Review before running ads". Failing it sets "No".

Nature of the decision: quantitative, not creative. Level 2 does not assess whether a video is good. It checks whether the market has already indicated so.

Level 3 - Kanish and the Bharat Maven team

Owens: the final quality check, campaign build, naming, launch and performance reporting.

Function: everything marked "Review before running ads" is checked for spelling, grammar, on-screen text, video formatting and aspect ratio. Campaign, ad set and ad are then built and named per the Nomenclature standard, and taken live. Ad Code, Ad Link and Ad Report Link are filled on going live. Performance figures follow within 72 hours.

Expected additionally: strategic input. Where a creative clears the threshold but reads weak, or where a pattern appears across creatives, that observation forms part of the deliverable.

Budget and brief requirements

Budget ownership

Channel	Budget provided by
Target	Sneha's team
Costco	Sneha's team

Channel	Budget provided by
UGC	Sneha's team
D2C	Anchit

Budgets are entered in the Budget column as a daily figure. Nothing is agreed verbally. A row without a budget in the sheet is not ready to build.

Target spend cap: \$1,000 per day, paced with automated rules in Meta. This is the directive agreed with Bala and corrects the \$1,700 spike on 19 July. Overpacing is flagged proactively.

Fields required before a row can be built

Field	Contents	Provided by
Ad To Be Run (Brief)	One or two lines on the ad's purpose and intended outcome	Sneha's team. Anchit for D2C.
Platform	Meta or TikTok	Sneha's team. Anchit for D2C.
Placement / Format	IG Reels, IG Stories, FB Feed, TikTok In-Feed or Advantage+	Sneha's team. Anchit for D2C.
Product / SKU	The exact product advertised	Sneha's team. Anchit for D2C.
Target Audience	Selected from the dropdown	Sneha's team. Anchit for D2C.
Target Audience Criteria	The actual targeting, for example "Age 40+, Interests: Business, Wellness"	Sneha's team. Anchit for D2C.
Budget	Daily figure	Sneha's team. Anchit for D2C.
Goal / KPI	The target, for example "ROAS > 2.0" or "CPA < \$25"	Sneha's team. Anchit for D2C.
Creative Link	A link that opens without a permission request	Sudhanshu
Landing Page URL	Full URL including all UTM and acquisition parameters	Anchit
Ads Activated	Set to "Review before running ads" once Level 2 clears	Anchit

Any field left blank is flagged by the agency, not assumed. Dropdowns are used wherever they exist: a typed variant of an audience name splits one audience into two report rows.

The automation - video id and ad code

The video id is the mechanism that connects organic performance to paid performance. It is taken from the end of the organic video URL, appears at the end of every ad name, and therefore also inside **utm_content**.

The chain

organic post URL -> video id -> ad name -> ad code -> paid performance

When the agency enters the Ad Code for a live ad, the analytical backend matches that ad code to the video id inside the ad name, and the video id back to its row in the Master UGC Tracker. Organic and paid data join automatically, with no manual matching and no lookups.

What the chain makes measurable

- Whether a high organic score predicts better paid performance
- Which content buckets return best against spend
- Which hook types convert
- Which creators drive revenue rather than views

Each of these depends on the video id being present and correct. An ad name without it still runs, but is excluded from the analysis, and the spend on it produces no learning.

acq_subsource extends the same principle. It carries **creator _ bucket _ hook**, so one split on the underscore returns revenue attributed by creator, content angle and hook style directly from the URL.

Reporting and turnaround

Step	Owner	Timing
Brief and creative complete in the sheet	Sneha's team, Sudhanshu, Anchit	Before build begins
Ads Activated set after Level 2 scoring	Anchit	Same day the data lands
Campaigns built, paused and named	Agency	2 working days
Approval	Anchit	1 working day
Live	Agency	Same day as approval
Ad Code, Ad Link, Ad Report Link	Agency	On going live
Spend, Impressions, Clicks, Conversions, Revenue	Agency	Within 72 hours
Performance refresh	Agency	Weekly, before the Monday review

Campaigns are built paused. Spend begins only after Level 2 clearance and row approval.

Standing conditions

Handles. All ads run from VAHDAM brand handles. Creator post URLs in the tracker are performance reference only.

Cohort direction

Cohort	Creative emphasis
Over 40	Inflammation, recovery, cortisol management
High Performer	Clean energy, focus, no afternoon crash

Channel and product

Channel	Product	Destination
Target	VAHDAM Ashwagandha Medium Roast Instant Coffee	Target PDP
Costco	Organic Turmeric Tea Variety Pack, 100-count	Instacart
D2C	Ashwagandha Coffee, expanding into capsules, supplements and teas	vahdam.com
UGC	Ashwagandha Coffee	Dedicated PageDeck page per content bucket

Corrections. Discrepancies between this document and the sheet are raised with Anchit and corrected here.
